About the Disorder

Bipolar disorder, also known as manic-depressive illness, is a brain disorder that causes unusual shifts in a person’s mood, energy, and ability to function. Different from the normal ups and downs that everyone goes through, the symptoms of bipolar disorder are severe. They can result in damaged relationships, poor job or school performance, and even suicide.

More than 2 million American adults, or about 1 percent of the population age 18 and older in any given year, have bipolar disorder. Children and adolescents can also develop bipolar disorder. It is more likely to affect the children of parents who have the illness. Like diabetes or heart disease, bipolar disorder is a long-term illness that must be carefully managed throughout a person’s life.

Unlike many adults with bipolar disorder, whose episodes tend to be more clearly defined, children and young adolescents with the illness often experience very fast mood swings between depression and mania many times within a day. Children with mania are more likely to be irritable and prone to destructive tantrums than to be overly happy and elated. Mixed symptoms also are common in youths with bipolar disorder. Older adolescents who develop the illness may have more classic, adult-type episodes and symptoms.

Bipolar disorder in children and adolescents can be hard to tell apart from other problems that may occur in these age groups. For example, while irritability and aggressiveness can indicate bipolar disorder, they also can be symptoms of attention-deficit/hyperactivity disorder, conduct disorder, oppositional defiant disorder, or other types of mental disorders more common among adults such as schizophrenia. Students with bipolar disorder may be prone to drug use, which can aggravate symptoms. Furthermore, drug use alone can mock many of the symptoms of bipolar disorder, making an accurate diagnosis difficult.

For any illness, however, effective treatment depends on appropriate diagnosis. Children or adolescents with emotional and behavioral symptoms should be carefully evaluated by a mental health professional. In addition, adolescents with bipolar disorder are at a higher risk for suicide. Any child or adolescent who has suicidal feelings, talks about suicide, or attempts suicide should be taken seriously and should receive immediate help from a mental health professional.

Symptoms or Behaviors

According to the Child and Adolescent Bipolar Foundation, symptoms may include:

- An expansive or irritable mood
- Depression
- Rapidly changing moods lasting a few hours to a few days
- Explosive, lengthy, and often destructive rages
- Separation anxiety
- Defiance of authority
- Hyperactivity, agitation, and distractibility
- Strong and frequent cravings, often for carbohydrates and sweets
- Excessive involvement in multiple projects and activities
- Impaired judgment, impulsivity, racing thoughts, and pressure to keep talking
- Dare-devil behaviors
- Inappropriate or precocious sexual behavior
- Delusions and hallucinations
- Grandiose belief in own abilities that defy the laws of logic (become a rock star overnight, for example)
Bipolar Disorder (Manic-Depressive Illness)

Educational Implications
Students may experience fluctuations in mood, energy, and motivation. These fluctuations may occur hourly, daily, in specific cycles, or seasonally. As a result, a student with bipolar disorder may have difficulty concentrating and remembering assignments, understanding assignments with complex directions, or reading and comprehending long, written passages of text. Students may experience episodes of overwhelming emotion such as sadness, embarrassment, or rage. They may also have poor social skills and have difficulty getting along with their peers.

Instructional Strategies and Classroom Accommodations
• Provide the student with recorded books as an alternative to self-reading when the student’s concentration is low.
• Break assigned reading into manageable segments and monitor the student’s progress, checking comprehension periodically.
• Devise a flexible curriculum that accommodates the sometimes rapid changes in the student’s ability to perform consistently in school.
• When energy is low, reduce academic demands; when energy is high, increase opportunities for achievement.
• Identify a place where the student can go for privacy until he or she regains self-control.
